

North Star Heating & Air Conditioning Announces Seasonal AC Maintenance Program for Sandy Residents

May 21, 2026

SANDY, UT - May 21, 2026 -

North Star Heating & Air Conditioning, a family-owned HVAC contractor serving Sandy and surrounding Utah communities since 1998, announces its seasonal air conditioning maintenance program designed to help homeowners prepare their cooling systems for the upcoming warm months. The program offers comprehensive system inspections and tune-ups at reduced rates through June 30, addressing the critical need for preventive maintenance before peak cooling season.

The Sandy-based company has introduced a North Star Heating & Air Conditioning special that provides homeowners with professional AC tune-up services for \$25, available from May 13 through June 30. This seasonal program reflects the company's commitment to helping local residents maintain efficient cooling systems while managing energy costs during Utah's hottest months.

"Regular air conditioning maintenance is essential for preventing unexpected breakdowns during the summer

when families rely on their cooling systems most," said Terry Kelsch, owner of North Star Heating & Air Conditioning. "Our seasonal maintenance program allows homeowners to address potential issues before they become costly repairs, while also improving system efficiency and extending equipment lifespan."

The comprehensive tune-up service includes inspection of all major components, cleaning of critical parts, refrigerant level checks, electrical connection testing, and thermostat calibration. Technicians also examine ductwork for potential airflow issues and provide homeowners with detailed assessments of their system's condition.

North Star Heating & Air Conditioning in Sandy, Utah has observed that properly maintained air conditioning systems operate up to 25 percent more efficiently than neglected units. The company's certified technicians report that annual maintenance can prevent approximately 80 percent of common AC failures, particularly those related to dirty coils, clogged filters, and low refrigerant levels.

The timing of the maintenance program aligns with industry recommendations for pre-season HVAC servicing. As temperatures in Utah begin rising in late spring, air conditioning systems that have remained dormant through winter months require professional attention to ensure reliable operation. The company's local dispatch from Sandy enables rapid response times throughout Salt Lake County and Utah County, covering zip codes 84070, 84090, 84092, 84093, and 84094.

"We see a significant increase in emergency repair calls every summer from homeowners who skip regular maintenance," added Kelsch. "This program encourages proactive system care, which ultimately saves money and prevents the discomfort of system failures during heat waves."

Beyond the seasonal maintenance program, North Star Heating & Air Conditioning provides comprehensive HVAC services including AC repair and installation, furnace services, heat pump installation, mini split systems, duct cleaning, and indoor air quality solutions. The company also offers plumbing services and HVAC financing options to accommodate various customer needs.

North Star Heating & Air Conditioning maintains full insurance and certification, operating with a focus on transparent pricing and honest assessments. The company has built its reputation over more than two decades through reliable service delivery and commitment to customer education about HVAC system care and efficiency.
